

# CABLE TOOL RIGS

Cable tool drill rigs are the most practical drilling method for large diameter, deep water wells in the Pacific Northwest, especially for deep wells in gravel aquifers. These rigs provide one of the cleanest drilling operations, with the best formation samples and a small footprint. They are ideal for initial water well development as well as water well redevelopment and rehabilitation.

From 2" monitoring wells to 7,000 GPM large-diameter wells, cable tool drilling is proven for installing the most efficient wells. This method is free of drilling fluids or additives, which can cause formation plugging.

Our founder, Randy Holt, founded his clean water drilling business using cable tool drilling. He has operated cable tool rigs for over 30 years and has installed wells which produced over 7,000 GPM. We are fortunate to have some of the most experienced cable tool drillers in the industry. Our cable tool drillers have a minimum of 20 years of experience on water well drilling, well development, well rehabilitation, aquifer testing and environmental related projects. Holt Services is your cable tool drilling specialist.

## SPECIFICATIONS & CAPABILITIES

- Bucyrus Erie 22W: 6" to 16" diameters to 600'
- Bucyrus Erie 60L: 8" to 30" diameters to 1,200'
- Speed Star 71: 6" to 16" diameters to 600'
- Speed Star 72: 8" to 30" diameters to 1,200'
