

LIMITED ACCESS ALL-TERRAIN RIGS

Many drill sites are not accessible with traditional, truck mounted drill rigs—muddy fields, construction sites, under electric wires and low over hangs, in cramped quarters or in rough terrain. No matter where your drill site is, you need a rig that can get onsite quickly, safely, get the job done right, and get out again. We've invested heavily in a diversified fleet of powerful, small-footprint, rubber track mounted rigs from manufacturers like Terra Sonic International, Landa Drilling Services Inc. and Mobile Drill Inc.

Our rigs are designed to reach tough locations, including steep grades and low overhead clearance. Our limited access rigs are built for sonic, hollow stem auger, mud rotary, coring and direct push drilling—all the capabilities you need for environmental, geotechnical, construction and exploration drilling. The Terra Sonic TSi 150 LC CC sonic rig and LDS 75 HT combination hollow stem auger, mud rotary, core rig additionally add the option of low overhead clearance.
